Hello, Queens!

This summer, the MTA is introducing a new Queens bus network.

We're expanding the network of all-day frequent bus service, adding new overnight service, removing some stops, and adding new connections to major destinations and transfer points.

To create the new Queens bus network, we took feedback from six years of public engagement to develop and refine proposals that meet riders' needs, modernize service, and improve operations for our workforce.

We've taken a fresh look at the map to bring you faster, more reliable service with better connections.

To do this, most bus routes have changed. This includes:

- ✓ new bus routes and route numbers
- ✓ new Rush routes that get you to the subway faster
- ✓ changes to bus stops, including stops being relocated or removed
- ✓ routing changes to reduce turns

There is a profile for each route detailing what riders can expect in the new network (pg. 28).

Future Trip Planner

Changes to the Queens bus network will go into effect in two phases:

Phase 1: June 29, 2025

Phase 2: August 31, 2025

The MTA has developed several tools to help riders learn about their trip options in the new network. Riders are encouraged to visit mta.info/queensbus to learn about new travel options.

For a more personalized approach, use the future trip planning tool, by inputting a start and end location to see trip options.

Project Phasing Guide

The Project Phasing Guide shows when every route is changing at a glance.

Remix

Map lovers can preview the new network with Remix, an interactive web-based mapping tool that enables riders to see if and how their route changes in the new network.

Route Look-Up Tool

The new route look-up tool lets the user select any bus route from a drop-down menu to see the latest information on their specific route(s), when the route will be changing, and links to additional detailed information. The route look-up tool works with "Google Translate," which enables riders to read information on their specific route(s) in their preferred language and can be found at the bottom of the web page.

Service alerts

Stay up to date on service changes and subscribe to receive service alerts for your current Queens bus routes. The MTA will email or text you service changes as they happen, as well as reminders when routes are changing this summer. You can also sign up to receive alerts for subway, Long Island Rail Road, and Metro-North Railroad services, and escalators and elevators. Sign up now at mta.info/notify. For live rider support, chat with us in the MTA app or call 511.

This report has been printed and shipped to libraries, elected and community board offices, and senior centers throughout Queens. Additional resources and archival materials are available on the project website: mta.info/queensbusredesign

Final Plan

The Queens Bus Network Redesign has been a historic effort to bring new and improved transit service to New York's largest borough.

The MTA has worked iteratively for six years to develop proposals that meet riders' needs, modernize service, and improve operations. The MTA Board unanimously approved this fourth and final version of the plan on January 29, 2025.

This report was first published in December 2024 as the Proposed Final Plan Addendum and has been updated to include several resources to help riders prepare for implementation, including a profile of each route in the new network, Implementation Project Phasing Map and Guide, an Equity Evaluation, Route Conversion Chart, and Staff Summary approved by the MTA Board.

Rider and Stakeholder Outreach

The MTA conducted over 250 outreach events to engage with Queens community members and stakeholders about bus service. These included in-person and virtual engagements such as pop-up events across the system, stakeholder briefings, meetings with elected officials, presentations to community boards, workshops, and open houses.

Over the life of the project, more than 18,000 comments were received from the public. These comments were analyzed extensively to develop and further refine the proposals presented at each stage of the planning process.

Final Network

The new bus network includes 124 routes, consisting of 94 local and 30 express routes. This is a net increase of 11 routes from the existing network.

94
local routes

30
express routes

124
total

Equity-informed approach

The planning process has been informed by equity from the start of the project. The MTA's team extensively studied demographic characteristics and equity areas of concentrated need in the Existing Conditions Report (September 2019).

The MTA's approach to equity expands beyond the federal requirements of Title VI of the Civil Rights Act of 1964 (Title VI), examining a broader set of socioeconomic indicators. In tandem with rigorous data analysis, the project team has been out in communities learning about how transit can better meet riders' needs, particularly focusing on communities far from the subway system. This has led to the development of this Final Plan that holistically works to mitigate adverse impacts and invest in service in areas with greater need.

A more detailed equity evaluation is available in Appendix B.

124,000

more people will have access to a bus that arrives **every 10 minutes or better**, 6 AM-9 PM

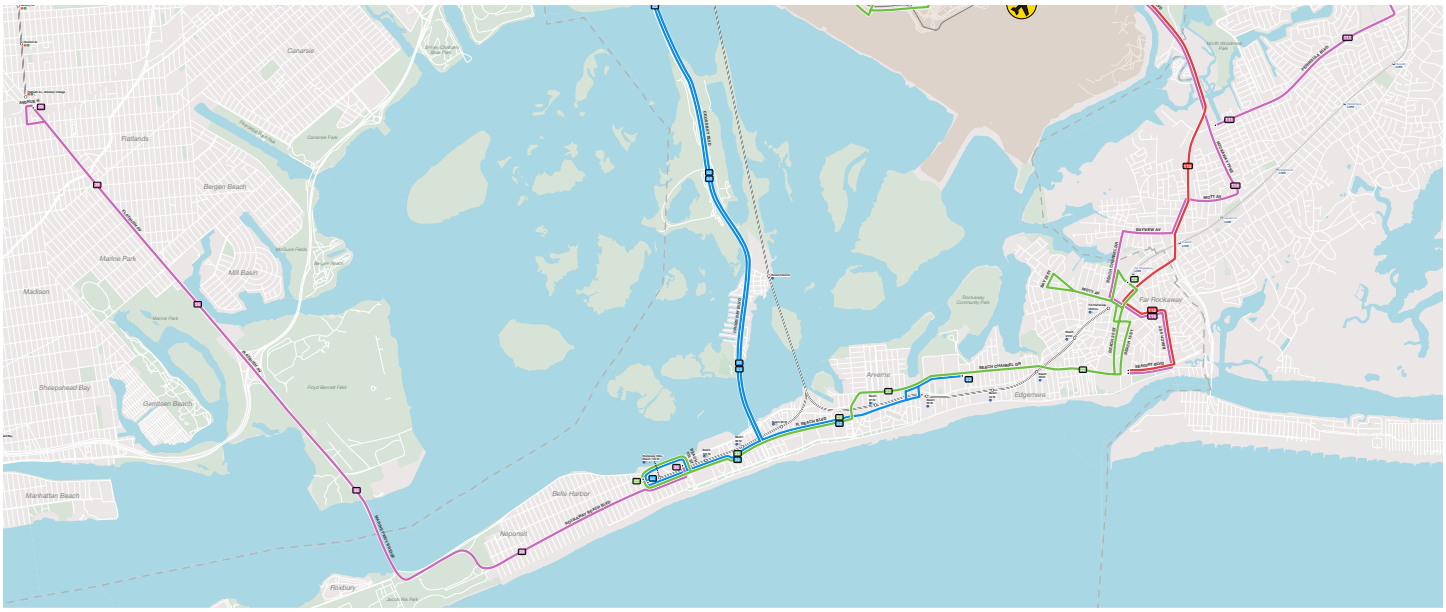

68,000

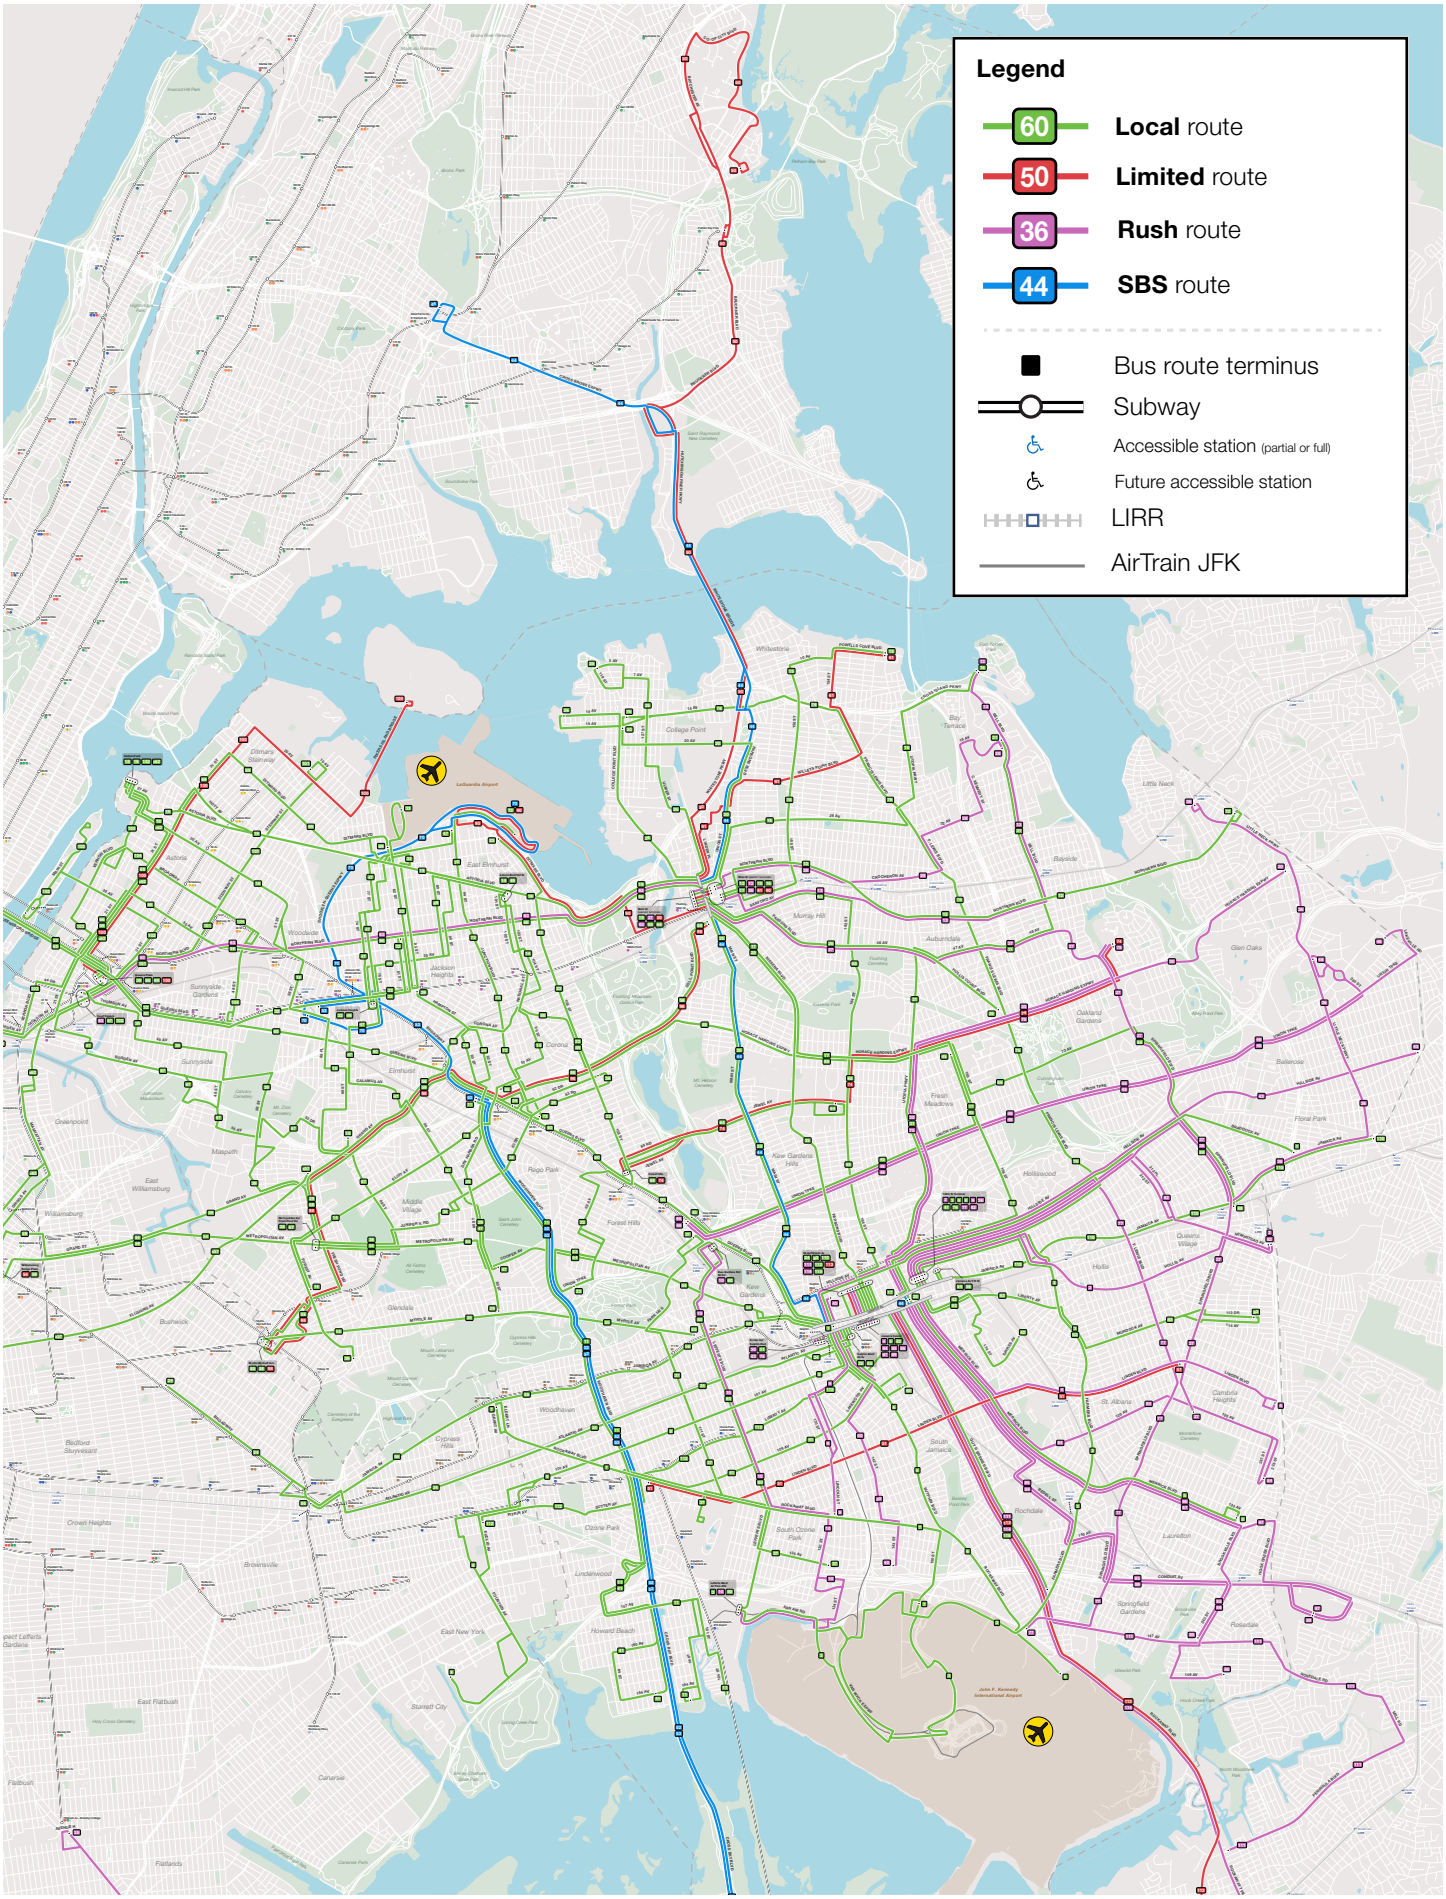

more people will have **access to 24-hour** bus service

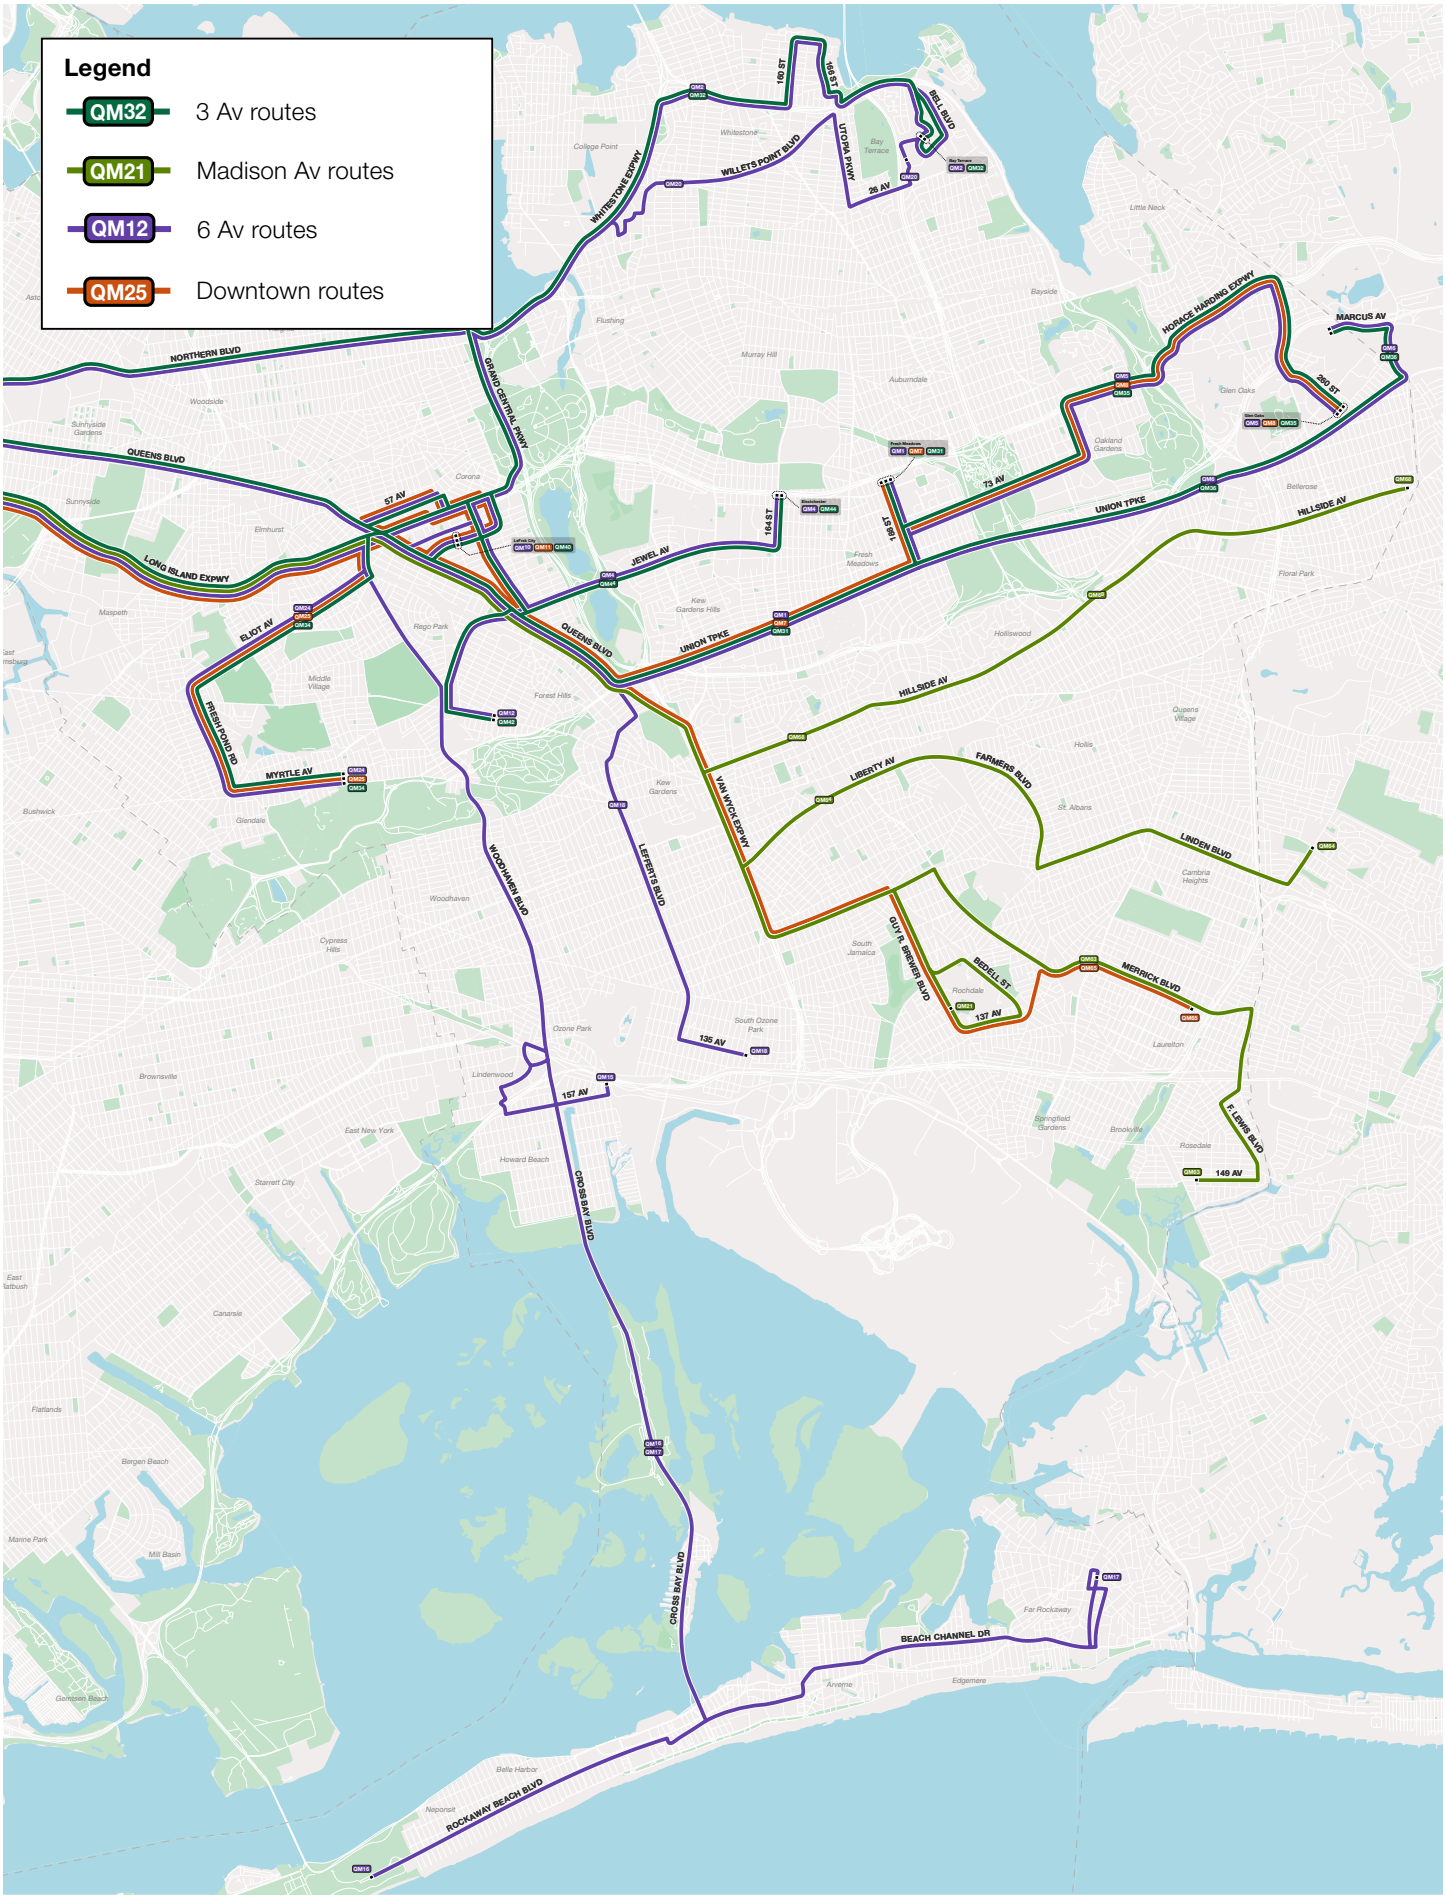

Local network

The new local network includes several improvements, including better bus stop spacing, more direct routes, clearer route labeling, and new service in some areas. We've expanded the all-day frequent network, which includes bus routes that arrive every 10 minutes or better from 6 AM to 9 PM on weekdays. 124,000 more Queens residents will live within ¼ mile of one of these routes. The network also has more overnight service, expanding access to the night network by 68,000 residents.

The plan also introduces a new route type, Rush, designed to speed up trips to subway and rail stations. These routes have a combination of local and limited stop spacing depending on the segment. Far from the subway, often where there is no other local service, Rush routes make local stops. Closer to hubs, these routes make limited stops. There are 25 Rush routes in the new bus network.

Express network

The new express network includes many of the same improvements seen in the local network. We've balanced bus stops and reduced turns on many routes to speed up trips.

Express bus riders will see the X63, X64, and X68 renamed with "QM" prefixes for clarity and rerouted in Manhattan to have more consistent, direct travel. The express network also has some routing changes in Queens, updated stop spacing, and the introduction of new QM65 service between Laurelton and Downtown Manhattan. The QM3 will be discontinued due to low ridership.

Route Conversion Chart

With this project, your route may change. We're rerouting some routes for faster and more direct service, and some routes are getting new numbers. You may see new routes in your area that may better serve your current trip. We're expanding the network with new and extended routes in more areas.

To help you figure out which route will be best for you with the new network, we have developed the following Route Conversion Chart.

Implementation

The implementation of the new bus network will take place in two phases, aligning with regular seasonal timetable changes on Sunday, June 29, and Sunday, August 31. Routes without Sunday service will change on the respective next regular service day.

With Phase 1 (June 29), roughly two thirds of routes will change. These routes are largely concentrated in Eastern Queens, Ridgewood, Corona, and Forest Hills.

Phase 2 (August 31) will include the rest of the new bus network. These routes are concentrated in Northwest and Southwest Queens.

We're implementing routes by bus depot to minimize inconvenience for riders and operators. Riders are encouraged to check mta.info/queensbus for detailed information on when and how their routes are changing.

Changes to bus stop signs began in February 2025 and will continue through Fall 2025 in some locations. Current bus service will continue until the change date for each respective route. Stop-specific service change information will be available in each Guide-A-Ride canister in advance of each phase.

Riders will see new signs at existing bus stops, as well as bus stop signage at new locations due to new routings, changes in route designation, or ADA compliance.

Phase 1: June 29, 2025

Phase 2: August 31, 2025

Changes to interborough service

Many bus routes that travel through Queens cross into neighboring jurisdictions. With the Queens Bus Network Redesign, there are a limited number of changes affecting Brooklyn, Manhattan, Bronx, and Nassau County riders.

In Brooklyn, the Q7 will be replaced by the Q112 in East New York. The Q35 will no longer serve stop pairs at Flatbush Av/ Troy Av and Flatbush Av/Utica Av during the day. Interborough riders should continue to engage with the Brooklyn Bus Network Redesign, which is proposing further changes to "Q" routes in Brooklyn and "B" routes in Queens.

In Manhattan, all proposed Queens Redesign changes to the express bus network will be implemented. The Q32 will have modified stops, the Q101 will no longer serve Manhattan, and the Q102 will be shortened on Roosevelt Island.

In the Bronx, the Q50 will now operate between Pelham Bay and Flushing overnight.

In Nassau County, routing and/or stop changes will be implemented on the Q5, Q36, Q46, Q85, Q110, and Q114. Nassau County will see the new Q87 and Q89 replace existing branches of the Q5 and Q85. The QM64 will also be extended into Nassau to a new stop at Elmont Rd/Dutch Broadway.

Rider resources

Future Trip Planner

For a more personalized approach, bus riders can use the Future Trip Planner at futuretrips.mta.info, which enables inputting a start and end location and seeing trip options with the full implementation of the bus route changes on August 31, 2025.

Project Phasing Guide

This resource is available on pages 20-23. It includes a table with the date of each route change alongside a corresponding color-coded map of the local bus network.

Route Lookup Tool

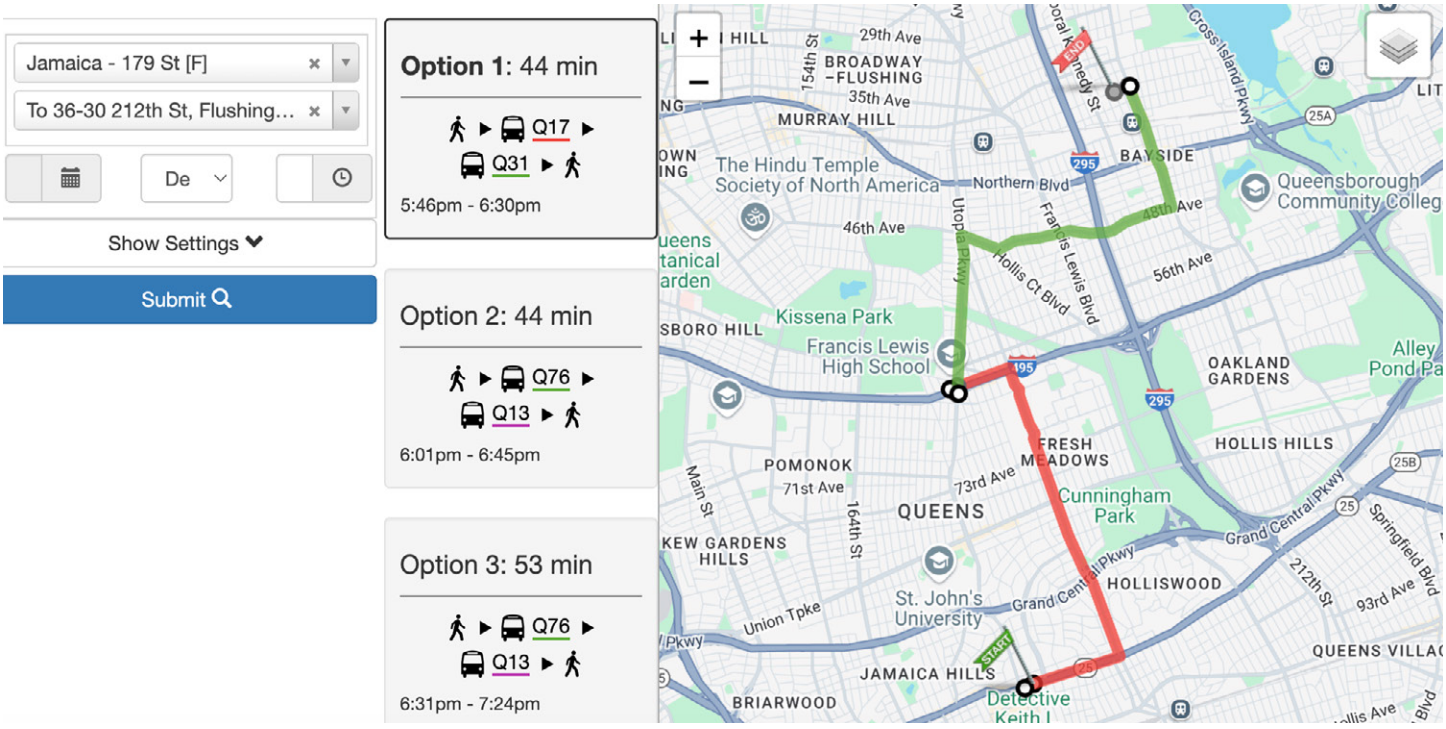

Available on mta.info/queensbus, this tool allows users to select any bus route from a drop-down menu to see the latest information on their specific route(s), when the route will be changing, and links to additional detailed information.

Service alerts

For assistance throughout the implementation process, riders are encouraged to use the chat feature in the official MTA app, call 511, use Bus Time, and sign up for alerts and real-time service information at mta.info/notify.

OMNY fare payment

Riders are also encouraged to learn more about OMNY and tap-and-go, the MTA's new, modern fare payment method. OMNY is currently available for most riders, including those eligible for reduced ares and tax-advantaged programs. While MetroCard will continue to be accepted into 2026, MetroCard sales will end December 31, 2025. Learn more about OMNY and tap-and-go at omny.info.

Sample directions from the Future Trip Planner

Informational pamphlet

Pop-up outreach event at Jamaica Av/Parsons Blvd

Implementation outreach

The MTA will promote the new network and phasing information across all MTA channels to help riders learn about and prepare for the new service starting this summer. Riders can expect to hear on-board bus announcements and see digital and print signage at bus stops, on buses, and in the subway system.

This spring, the project team will present the phasing plan and rider tools to all Queens community boards. Each phase will be supported by pop-up outreach events as well as a Customer Ambassador program, where MTA employees will be deployed to locations across the borough to distribute information to riders and provide an opportunity to directly engage with agency staff members on the Redesign.

Post-implementation analysis

Following the completion of the second phase on August 31, 2025, the MTA will conduct a post-implementation analysis. We will analyze changes in bus speeds, ridership, reliability, travel times, rider satisfaction, and other relevant variables over the first six months of the new network. The results of this analysis will inform future adjustments to the bus network to ensure that service is meeting its stated goals.

Q5 Merrick Boulevard

Service between Jamaica and Laurelton

CHANGES TAKE EFFECT JUNE 29, 2025

The Q5 will no longer serve Green Acres Mall or the Rosedale LIRR station on weekdays.

- For weekday service to Green Acres Mall, take the new Q87.
- For weekday service to Rosedale LIRR, take the new Q86.

On weekends, the Q5 will keep its current service. It will terminate at Green Acres Mall during the day and at Rosedale LIRR station overnight. The Q5 Limited will be discontinued.

Q7 Rockaway Boulevard

Service between JFK Travel Plaza and Cypress Hills

CHANGES TAKE EFFECT AUGUST 31, 2025

The Q7 will be rerouted on its western end to provide new service along Rockaway Blvd between Liberty and Jamaica Avs.

Current Q7 service to East New York along Sutter and Pitkin Avs will be discontinued and replaced by the Q112.

On its eastern end, the Q7 will be shortened to the JFK Travel Plaza. Service to JFK Cargo Area C will be provided by Port Authority shuttles and the Q3.

Q11 Woodhaven Boulevard

Service between Elmhurst and Howard Beach

CHANGES TAKE EFFECT AUGUST 31, 2025

The Q11 will be combined with the Q21. Existing Q11 service between 157 Av and Pitkin Av will be discontinued. Riders can instead use the A, Q52-SBS/Q53-SBS, or rerouted Q11.

Some stops have been removed from this route.

Q20 Main Street

Service between College Point and Jamaica

SERVICE STARTS JUNE 29, 2025

The Q20 will connect College Point and Jamaica using the existing Q20A routing along 20 Av and Main St.

Existing Q20B service on 14 Av will be discontinued and replaced by the Q76.

To the south, the Q20 will approach Downtown Jamaica via Jamaica Av instead of Sutphin Blvd.

Q24 Atlantic Avenue

Service between Jamaica and Bushwick

CHANGES TAKE EFFECT AUGUST 31, 2025

The Q24 will mostly keep its current routing, but some stops in Queens have been removed.

The turnaround will be revised in Jamaica to use Archer Av in both directions, ending at 88 Av/Parsons Blvd.

Q26 College Point – Fresh Meadows

CHANGES TAKE EFFECT JUNE 29, 2025

The Q26 will be extended north to College Point, replacing Q65 service along College Point Blvd. In Flushing, the Q26 will be rerouted along Sanford Av and Main St.

The route will have 24-hour service with increased frequencies. Overnight, the Q26 will only operate between College Point and Flushing.

Some stops have been removed.

Q36 Little Neck Parkway

Service between Little Neck and Jamaica

CHANGES TAKE EFFECT JUNE 29, 2025

The Q36 will be rerouted in Queens Village from 212 St/212 Pl and Jamaica Av to Hillside Av and Springfield Blvd.

- For service on 212 St/212 Pl, take the new Q82.
- For service on Jamaica Av, take the Q110.

The Q36 will make limited stops on Hillside Av. For local service, take the Q1, Q3, or Q76.

On weekends, the Q36 will now operate its full route to the Little Neck LIRR station. The Q36 Limited will be discontinued.

Q38 Rego Park – Maspeth

CHANGES TAKE EFFECT JUNE 29, 2025

The Q38 will be split in two and will no longer operate as a loop.

- Service between Rego Park and Maspeth will be maintained.
- Service on the existing northern half of the route will be replaced by the new Q14.

Some stops have been removed.

Q65 164th Street

Service between Flushing and Jamaica

CHANGES TAKE EFFECT JUNE 29, 2025

The Q65 will be shortened to Flushing. Q65 service from College Point to Flushing will be discontinued and replaced by the Q26. Some stops have been removed from this route.

In Flushing, the Q65 will be rerouted from 45 Av and Bowne St to 162 St and Sanford Av to replace Q12 service. Alternative service near Flushing Hospital will be provided by the Q26 and Q27.

The Q65 Limited will be discontinued.

Q102 36th Avenue / Roosevelt Island

Service between Roosevelt Island and LIC

CHANGES TAKE EFFECT AUGUST 31, 2025

The Q102 will now connect Long Island City and Roosevelt Island. In Queens, the route will start at Court Square, traveling to Roosevelt Island via Jackson Av, 31 St, and 36 Av.

On Roosevelt Island, the route will be shortened to terminate at the Roosevelt Island Tramway.

- For service on 31 St, take the N W trains.
- For service on 30 Av, take the Q18.
- For service through Queensbridge, take the Q103.

QM63 Rosedale – Midtown

via Madison Avenue

THE X63 BECOMES THE QM63 ON JUNE 29, 2025

The X63 will be renamed the QM63. In Queens, the QM63 will be rerouted to use 249 St instead of Sunrise Hwy in both directions. Midtown-bound QM63 trips will make stops on 23 St, Madison Av, and 57 St. Service on 3 and 5 Avs will be discontinued. The Queens-bound QM63 routing in Manhattan will not change.

Some stops have been removed from this route. Peak frequency will decrease slightly, and service spans will change.

Appendix A: Staff Summary

Service Changes: Queens Bus Network Redesign

Christopher Pangilinan, Chief, Operations Planning

Service Issue

The proposed Queens Bus Network Redesign described in the December 2024 Queens Bus Network Redesign Proposed Final Plan Addendum (the "Proposed Final Plan Addendum") represents a historic effort to reimagine the borough's bus network based on our riders' priorities: reliable service, faster travel, better connections, and simplified service. The proposed redesign of the local and express bus networks is grounded in our established network redesign strategies: improved route design, enhanced connectivity, improved frequency, balanced bus stops, improved transit equity, improved accessibility, and expanded bus priority.

The proposed Queens Bus Network Redesign, including the individual route profiles, is set forth in the Proposed Final Plan Addendum, which can be viewed at https://new.mta.info/queensbusredesign.

Recommendation

Implement the Queens Bus Network Redesign.

Impact on Funding

The Queens Bus Network Redesign would increase the net annual operating cost of Queens bus service by approximately $33.7 million. This includes $14.3 million of NYC Transit operating costs (MTA) and $19.4 million of MTA Bus operating costs (funded by the City of New York). The additional operating budget would enable increased frequency on key routes, allowing for an extensive, all-day frequent network. The increased budget would also allow for expanded access, increased service spans, and routing changes that provide new connections.

Implementation Date

Implementation is planned for two phases in the summer and fall of 2025.

The full staff summary is available online at https://www.mta.info/document/163136

Purpose

The purpose of this staff summary is to obtain Board approval to implement the Queens Bus Network Redesign described in the December 2024 Queens Bus Network Redesign Proposed Final Plan Addendum (the "Proposed Final Plan Addendum") for local and express bus service. The redesigned bus network would better serve ridership demand while improving riders' commutes through faster and more reliable travel. The redesigned Queens bus network has simpler, more direct routes, improved bus stop spacing, enhanced connectivity, improved frequency on key routes, and expanded bus priority.

Discussion

There are approximately 2.4 million residents of Queens. On an average weekday, there are more than 800,000 bus boardings on bus routes serving Queens. Roughly 45 percent of Queens residents commute via public transit, with a mean travel time of 43 minutes. There are 71 MTA Bus Company and 42 New York City Transit routes in Queens (including the B24, B32, B57, and B62 which are incorporated in this study as they travel into Queens).

An Existing Conditions Report was completed in August 2019. This report looked at the borough, its people, its travel needs, and what can be done to improve bus travel to meet those needs. It included an in-depth examination of the following key data elements: population and employment demographics, travel patterns, ridership, slow bus speeds, service reliability metrics, and productivity and financial efficiency metrics. The Report, along with valuable information gathered from our riders through public outreach, was used to inform the decision-making and overall process that created the subsequent plan iterations.

Appendix A

Staff Summary

MTA Bus Company MTA New York City Transit

The initial Queens Bus Network Redesign Draft Plan (the "2019 Draft Plan") was released in December 2019 and was followed by a round of outreach throughout winter 2020. Public feedback was solicited via in-person open houses and on-street pop-up events, the MTA website, Community Board presentations, presentations to elected officials and other key stakeholders, and via the MTA's social media platforms. The project was paused in March 2020 due to the COVID-19 pandemic. The project remained on pause for approximately 18 months.

Following the project's restart, the planning team evaluated over 11,000 comments from the Draft Plan outreach. From these comments, the team decided the best way forward was to withdraw the 2019 Draft Plan and create a new plan based off the wealth of feedback received. The 2019 Draft Plan was officially withdrawn in December 2021, and the New Draft Plan was released in March 2022. The New Draft Plan release was followed by another robust round of outreach, which included soliciting feedback at outdoor open houses, pop-up events, virtual public workshops, the MTA website, presentations to elected officials and other key stakeholders, and via the MTA's social media platforms.

The nearly 4,000 comments received on the New Draft Plan were used to inform revisions to the proposals developed for the Proposed Final Plan, released in December 2023. The Proposed Final Plan had yet another robust round of public outreach, including at least one presentation to each Community Board in Queens.

Each version of the proposed Queens Bus Network Redesign included numerous changes to bus stops, routings, and schedules. There are several key redesign strategies that were employed when developing the New Draft Plan that remained omnipresent through development and revisions to the Proposed Final Plan:

- Improve route design: Straighter routes with fewer turns reduce delays that can lead to gaps in service and overcrowding. In addition, the project introduces a new route type, "Rush", which aims to connect riders quickly between outer borough neighborhoods and subway stations. These routes pick up riders locally and then skip stops to the subway, stopping only at major transfer points and key destinations.
- Enhance connectivity: The project aims to create a stronger network grid, with new routes that fill in gaps and with improved connections within Queens and to other boroughs.
- Improve frequency: Prioritizing an all-day frequent network (10 minutes or better between 6 a.m. and 9 p.m.) is critical to getting customers to their destinations while allowing for easy, flexible travel. Frequent service allows customers to change plans and rely on the transportation network.
- Balance bus stops: Each bus stop removed from a route saves an average of 20 seconds, but depending on location and time of day, removal of a stop might save a minute or more travel time for everyone on the bus and makes bus service more reliable. These savings stem from buses not having to exit and re-enter traffic so often. Careful consideration has been given to each stop proposed to be discontinued, with analysis of ridership, distance between stops, transfers, community facilities, local demographics, and accessibility.

- Expand bus priority with the NYC Department of Transportation (NYC DOT): NYC DOT has conducted an analysis of major Queens corridors to identify streets where future bus priority treatments would have the greatest impact for Queens bus riders. The process identified 24 top-ranked corridors to be studied for potential bus priority street improvements. These improvements may include new bus lanes, busways, queue jump intersections, transit signal priority (TSP), and other interventions.
- Improve transit equity: The project has paid specific attention to areas with greater concentration of residents that are low-income, minority, and are transit dependent to help improve transportation equity. The MTA developed equity indices to evaluate the difference between the existing and proposed networks for those that live in areas of concentrated need. Understanding where these areas of concentrated need are located helped the project team understand where changes to the network, such as frequency increases and service span expansions, would most directly serve equity communities.
- Improve accessibility: The project team looked closely at areas with a high concentration of residents with disabilities. This project would streamline routes and expand connections to current and future ADA-accessible subway stations and would fill gaps in the existing bus network to expand the reach of accessible public transportation. In addition, the project team has used multiple criteria to evaluate bus stop spacing from an accessibility perspective.

A public hearing was held at Queens Borough Hall on July 24, 2024, soliciting final comments on the service changes proposed in the Proposed Final Plan. July 26, 2024 then marked the end of the public comment period for the Proposed Final Plan.

After refining the Proposed Final Plan based on constructive feedback from riders and other stakeholders who attended the July 2024 public hearing or submitted written comments, we have completed the Proposed Final Plan Addendum. The Proposed Final Plan Addendum includes 49 existing routes with routing changes, 17 new routes, and four retired routes. It would expand the bus network and increase connectivity within the borough and beyond.

The Proposed Final Plan included several route changes that are no longer being pursued in the Proposed Final Plan Addendum, in response to public feedback and operational constraints. Changes between the Proposed Final Plan and the Proposed Final Plan Addendum are detailed on individual route profile pages. Changes to “Q” routes in Brooklyn and “B” routes in Queens, with the exceptions of the Q7, Q35, Q112, B57, and B62 will be explored further in the ongoing Brooklyn Bus Network Redesign.

In addition to routing changes, the Proposed Final Plan Addendum includes proposed bus stop removals to improve bus stop spacing, balancing the need to improve travel times with the need to serve our riders with mobility limitations. Bus stop balancing changes would allow us to better match peer systems and improve average local route stop spacing from approximately every 950 feet to every 1300 feet. The improved bus stop spacing will increase the time buses spend moving and, in turn, improve riders’ commutes. Some bus stop changes have been made in advance of the Queens Bus Network Redesign being implemented in conjunction with NYC DOT’s bus priority projects. Additionally, preliminary bus stop pole and sign work will begin prior to the actual implementation

dates, as time is required for NYC DOT staff to make the necessary changes in advance of the proposed implementation dates.

Schedule changes include frequency increases and decreases and extended service spans for certain routes. 17 existing routes would see frequency increases, 63 would see no frequency changes, and 29 would see frequencies reallocated or decreased. Service spans would be expanded for 8 existing routes, 97 routes would see no span changes, and 4 would see reduced spans. For detailed information on proposed schedule changes by route, see the Proposed Final Plan Addendum.

Transfers are a crucial component of the redesign process, and interconnected routes provide faster travel times and enable increased frequency. The Queens Bus Network Redesign will result in some riders requiring an additional transfer to complete their trip. To ensure that these riders do not have to pay an additional fare to transfer, we will seek to add additional free transfers to the system where appropriate.

A service equity analysis, conducted in accordance with Title VI of the Civil Rights Act of 1964 and related Federal Transit Administration guidance materials, found that the Queens Bus Network Redesign described in the Proposed Final Plan Addendum would not result in a disproportionate impact on either minority or below-poverty populations.

More details, including changes between the Proposed Final Plan and the Proposed Final Plan Addendum, can be viewed at https://new.mta.info/queensbusredesign.

Recommendation

Implement the proposed Queens Bus Network Redesign as set forth in the Proposed Final Plan Addendum.

Alternatives

1. *Do nothing.* The status quo would be maintained, missing an opportunity to modernize the Queens bus network and improve speed and reliability.
2. *Consider less comprehensive changes.* Further study would be required to identify less comprehensive changes that could be made to individual routes, which would delay implementation of route changes well beyond 2025. Further, making less comprehensive changes would substantially reduce or eliminate many of the benefits achieved by a comprehensive network design.

Appendix A

Staff Summary

MTA Bus Company

MTA New York City Transit

Impact on Funding

The Queens Bus Network Redesign would increase the net annual operating cost of Queens bus service by approximately $33.7 million. This includes $14.3 million of NYC Transit operating costs (MTA) and $19.4 million of MTA Bus operating costs (funded by the City of New York) that would be implemented in the summer and fall of 2025. The additional operating budget would enable increased frequency on key routes, allowing for an extensive, all-day frequent network. The budget would also allow for expanded access, increased service spans, and routing changes that provide new connections.

Implementation Date

Implementation is planned for two phases in the summer and fall of 2025.

Appendix A

BOARD RESOLUTION

WHEREAS, in a Staff Summary dated January 17, 2025 (the "Staff Summary"), the Chief of Operations Planning recommended the following action:

- Implementation of the Queens Bus Network Redesign described in the December 2024 Queens Bus Network Redesign Proposed Final Plan Addendum (the "Proposed Final Plan Addendum")

WHEREAS, a public hearing was held pursuant to the MTA Board adopted Service Change Guidelines (the "Service Change Guidelines") on July 24, 2024 concerning the service changes described in the December 12, 2023 proposed Queens Bus Network Redesign Final Plan (the "Final Plan");

WHEREAS, a summary of public comments on the service changes described in the Final Plan, and the New York City Transit staff responses thereto, accompanied the Staff Summary; and

WHEREAS, upon a review of the Staff Summary and the documents referenced in or attached thereto, the Board has determined that the additional net operating costs associated with the proposed Queens Bus Network Redesign as compared to the costs associated with the current Queens bus network are funded in the 2025 budget;

WHEREAS, the implementation of the Queens Bus Network Redesign constitutes a major service change according to the Service Change Guidelines, and the Board has considered the analysis of this major service change that was prepared by New York City staff in accordance with Title VI requirements, and has considered the impacts of this proposed major service change upon riders of mass transportation services, including minority and low-income users of such services;

WHEREAS, not less than thirty days written notice of the implementation of the Queens Bus Network Redesign shall be given to the Mayor and City Council of the City of New York pursuant to New York Public Authorities Law Section 1205(4), and such notices shall be provided with notice to the Speaker of the New York City Council and the Public Advocate;

NOW, THEREFORE IT IS RESOLVED that the Board approves the major service changes described in the Staff Summary, including the attachments thereto; and authorizes the President or his designee to implement such changes at such time as deemed practicable.

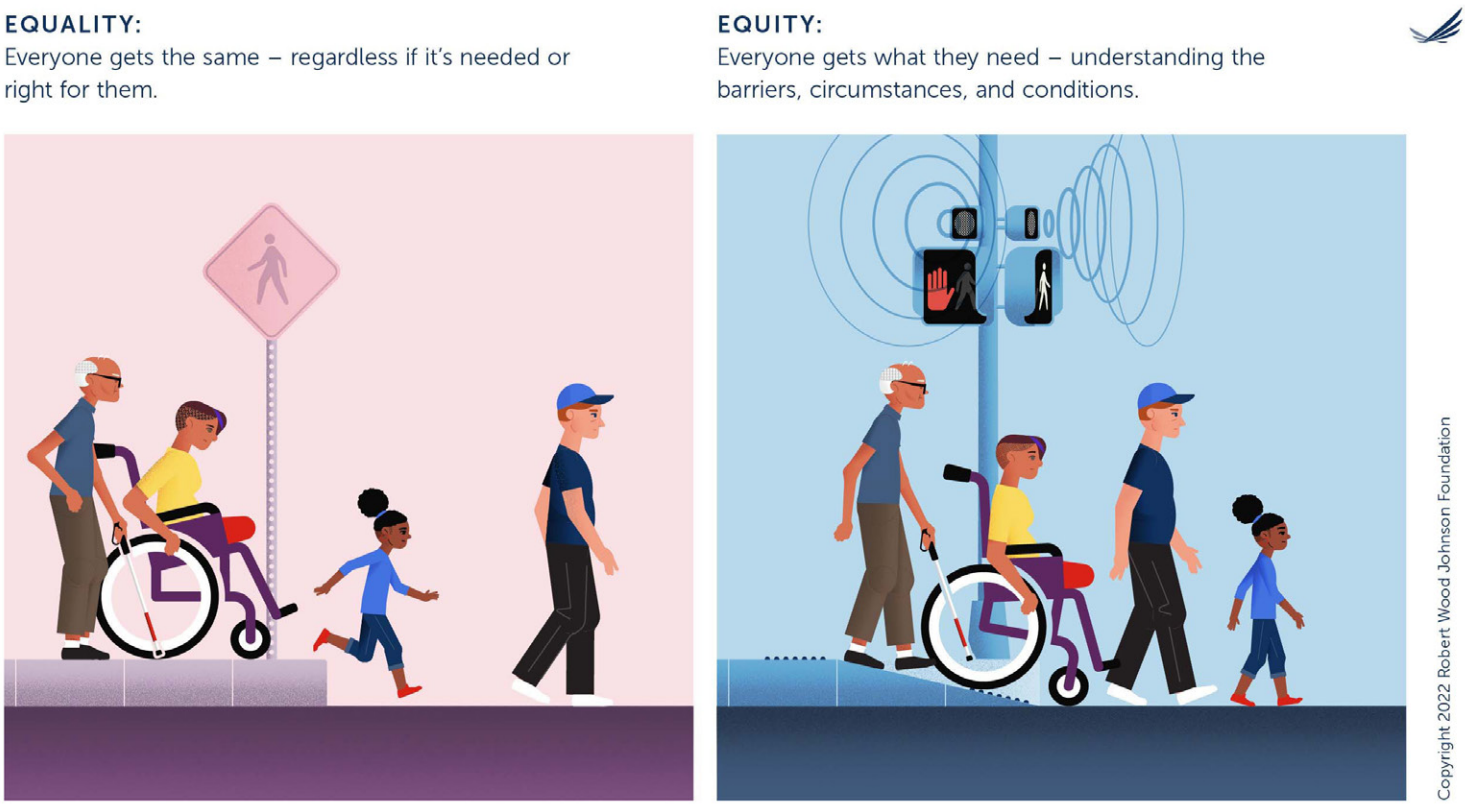

Appendix B: Equity Evaluation

Introduction

The bus network in Queens plays a vital role in connecting communities to essential services, employment, education, and recreation. Over the last several decades, New York City has experienced significant growth and change, but the bus network has not kept up with the evolving needs of our riders. The Queens Bus Network Redesign aims to create a more efficient, reliable, and accessible bus system that better serves the needs of all riders, while prioritizing equity to address disparities in access and opportunity.

Equity in the context of public transit is the fair and just distribution of access, resources, and opportunities, ensuring that all individuals – especially those from historically underserved or marginalized communities – benefit from transit services and infrastructure without bearing disproportionate burdens.

This assessment analyzes the investment, potential improvements, and benefits of the Queens Bus Network Redesign on communities across our service area, with a focus on historically underserved populations. It also assesses how the project aligns with our commitment to equitable access to transportation.

Reproduced with permission of the Robert Wood Johnson Foundation, Princeton, N.J.

Appendix B

MTA's Equity Framework

Recognizing the presence of historically disadvantaged populations helps ensure that resources are invested, either through allocation or reallocation, and protected within these communities to reduce obstacles to transit access.

As the Queens Bus Network Redesign was developed, three Equity Tiers were created to aid in identifying the equity concern in an area. Federally, this is defined by Title VI of the Civil Rights Act of 1964, which is characterized by a high concentration of low-income or minority populations. In addition to Title VI status, New York City Transit considers a broader set of socioeconomic factors in analyzing equity: transit dependency, minority representation, income, access to opportunity, and mobility needs. Each indicator was weighted based on its relevance to transit equity, as illustrated in the chart below, arranged generally from highest to lowest weight.

Indicators	Theme
Population by Race and Ethnicity Includes all groups except White Alone	Minority Population
Zero Vehicle Households	Transit Dependency
Population Living in Poverty	Low Income People
Average Travel Time to Work Includes commutes greater than 45 min in NYC, and commutes greater than 60 min outside of NYC	Access to Opportunity
Population with a Disability Only those under age 65	Mobility Needs
Limited English Proficiency Households	Minority Population
Age Includes those under 18 years old and over 75 years old in NYC, and those over 75 years old outside of NYC	Transit Dependency & Mobility Needs
Population with a High School Diploma or Lower Those over 25 years old	Access to Opportunity

Data source: American Community Survey 5-year estimates (2018-2022); NYC – Census block groups; Outside of NYC – Census tracts

Appendix B

This approach aligns with best practices observed among other U.S. transit agencies that also rely on geospatial analysis and up-to-date census data to regularly assess areas of need. While most agencies use a set of common variables, such as race, income, vehicle access, and commute times, they may weigh indicators differently to reflect the specific needs of their service areas. This alignment with industry standards ensures that the MTA's equity analysis is thorough, relevant, and grounded in established methods.

Considering Equity in Queens Bus Network Redesign

To effectively incorporate equity considerations into the Queens Redesign planning process using a data-driven approach, a detailed Equity Score Index was developed using the MTA equity framework indicators listed above. This index assigned Equity Scores to geographies, facilitating an evaluation of differences between the existing and proposed Queens bus network. Equity Scores were then categorized into three distinct tiers to prioritize considerations based on the level of equity impact.

Tier 1: Significant Equity Consideration represents areas where transit-dependent populations, historically underserved communities, and/or those facing systemic inequities are most concentrated, indicating a critical need for focused improvements.

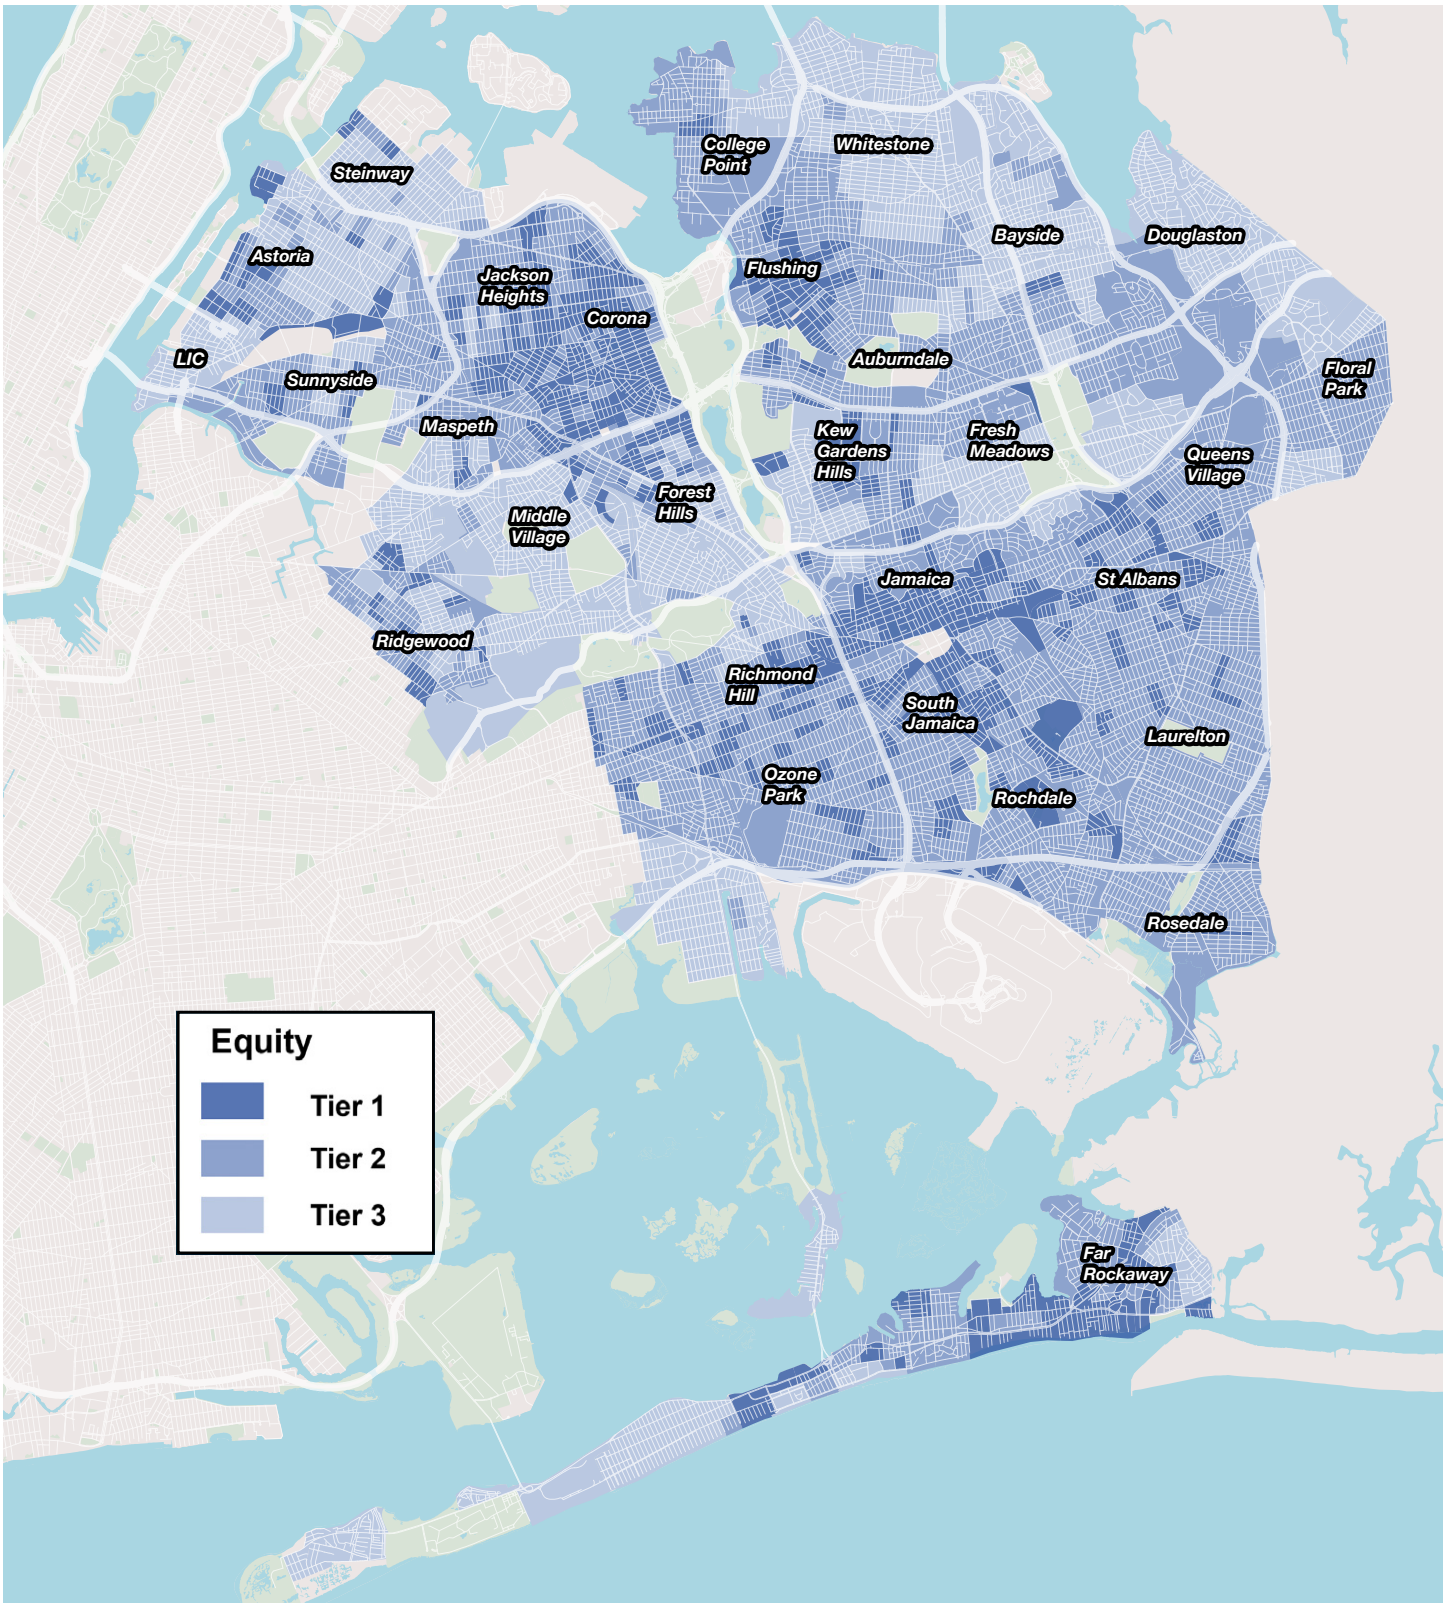

Tier 2: Moderate Equity Consideration includes areas with notable, though less severe, equity challenges, suggesting a need for enhancements that balance equity goals with operational considerations.

Tier 3: Low Equity Consideration encompasses areas with comparatively lower equity-related concerns, where adjustments may still be valuable but are less urgent.

In compliance with federal standards, all communities in Title VI areas are considered in either Tiers 1 or 2 (Significant or Moderate Equity Consideration).

Appendix B

This map represents the study area, with data analyzed by Census block group in New York City.

Appendix B

Route Improvement Assessment

To evaluate the potential service improvements that the Queens Bus Network Redesign will offer, an analysis was conducted on the Proposed Final Plan Addendum comparing the proposed Redesign network with the existing network, focusing specifically on enhancements aimed at addressing key service issues. Particular attention was given to identifying strategies that tackle persistent challenges such as unreliable routes, confusing service patterns, and redundant, overlapping, or slow services. By identifying where these solutions will be implemented, this evaluation provides insight into how effectively the Redesign addresses the needs of moderate and significant equity areas and enhances the overall accessibility and reliability of bus service in these communities.

To calculate the population for each indicator within our equity framework for a bus route, a ¼-mile walkshed was created around each bus stop. The walksheds from all stops along the route were combined to form the overall bus route walkshed. This combined walkshed was then overlaid with census block group data from the 2018–2022 American Community Survey to estimate the population within ¼ mile of the route. For census block groups that were only partially covered by the bus route walkshed, we assumed a uniform population density across the block group to estimate the population within the walkshed.

Each of the proposed route changes aims to address one or more rider priorities: reliable service, faster travel, better connections, and simplified service. To achieve these goals, we applied a range of globally recognized network redesign strategies. The route strategies used are described below, along with examples of each, and a full list of all the strategies by route can be found in Appendix E.

Appendix B

Schedule

Improve Frequency and Span

Improvements to frequency and spans offer significant benefits for riders and the overall transit network. Increased frequency reduces wait times and overcrowding, making transit more convenient and reliable, particularly for time-sensitive trips. Expanding service spans ensures that buses operate earlier in the morning and later into the evening or overnight, providing critical connectivity for workers with non-traditional schedules, such as those in retail, healthcare, or airport operations.

In the Redesign, frequency improvements were made to 16 routes, driven primarily by higher passenger demand and prioritized in routes that serve Tier 1 and 2 areas. As for spans, 8 routes saw an increased span, due to the introduction of new overnight service or a minor span adjustment.

Frequency Increases:

Q1, Q3, Q7, Q8, Q9, Q11, Q25, Q26, Q36, Q50, Q54, Q67, Q75, Q80, Q89, Q115

Span Increases:

Q7, Q16, Q23, Q26, Q36, Q47, Q60, Q80

The **Q1** is a good example of a frequency increase benefiting several Tier 1 and 2 areas. By offering more frequent service, the route provides all-day frequent service at local stops on Hillside Avenue, improving wait time for more customers. As the primary local option on Hillside Avenue, the enhanced frequency along with the extension to Sutphin Boulevard and Jamaica Avenue near the Jamaica LIRR station significantly reduces travel times for residents in the area, where nearly 70% of the population face commutes longer than 45 minutes.

The **Q7** has received a span increase to address the lack of east-west overnight service along the Rockaway Boulevard corridor. Providing 24-hour transit service is essential for communities that depend on public transportation as their primary means of commuting. In the areas served by the **Q7**, nearly 30% of residents do not own a vehicle, making reliable overnight service critical for equitable access to jobs, healthcare, and other essential services.

It is important to note that this analysis compares the proposed frequencies and spans from the Proposed Final Plan Addendum to the existing network. If a new route was merely a relabeling of an existing route with the same routing pattern, the frequencies and spans from the original route were used in the comparison.

Appendix B

All-Day Frequent and Overnight Network

To further analyze frequency and spans through an equity lens, we conducted an analysis comparing the existing all-day frequent network and the existing overnight network with those proposed in the Proposed Final Plan Addendum. The all-day frequent network refers to bus stops that have 10-minute-or-better frequency throughout the day (6a.m.-9p.m.), while the overnight network encompasses routes operating between midnight and 4a.m.

We calculated the population that has access to these networks considering a walkshed of ¼ mile from bus stops, and the results are as follows:

All-Day Frequent Network Coverage

	Total Queens Population	Existing Network		Proposed Network		Increase	
		Population	Percent	Population	Percent	Population	Percent
Tier 1	627,000	419,000	67%	445,000	71%	26,000	4%
Tier 2	1,083,000	620,000	57%	670,000	62%	50,000	5%
Tier 3	651,000	283,000	43%	331,000	51%	48,000	8%
Total	**2,361,000**	**1,322,000**	**56%**	**1,446,000**	**61%**	**124,000**	**5%**

A network that has a better all-day frequent grid gives riders more freedom to travel across the borough without having to look at a schedule. The proposed plan results in a 4% increase in the population served by the frequent network in Tier 1 areas. While this growth may seem modest, it reflects the fact that Tier 1 areas are already well-covered by the existing frequent network. In Tier 2 areas, 5% more people would gain access to all-day frequent service, while Tier 3 areas would see an 8% increase in coverage. These changes build upon the strengths of the existing network while extending frequent service to additional populations. Overall, the plan achieves a 5% increase in the total population served by the all-day frequent network, meaning that after the Redesign, 61% of the total population of Queens will have access to 10-minute-or-better bus service within a ¼-mile walk.

Appendix B

Overnight Network Coverage

	Total Queens Population	Existing Network		Proposed Network		Increase	
		Population	Percent	Population	Percent	Population	Percent
Tier 1	627,000	482,000	77%	505,000	81%	23,000	4%
Tier 2	1,083,000	806,000	74%	828,000	76%	22,000	2%
Tier 3	651,000	408,000	63%	430,000	66%	22,000	3%
Total	**2,361,000**	**1,695,000**	**72%**	**1,763,000**	**75%**	**68,000**	**3%**

Another key goal of the Redesign was to expand options for transit-dependent individuals completing essential trips. Recognizing that not everyone works a 9-to-5 schedule, the project focused on improving late-night and overnight transit service, ensuring more options for those traveling outside of daytime peak commute times. The proposal would increase access to the overnight network by 4% for riders living in Tier 1 areas, 2% in Tier 2 areas, and 3% in Tier 3 areas. Similarly to the all-day frequent network, the overnight network is designed to serve the population that relies on it the most, and after the Redesign, 80% of residents in Tier 1 areas will have access to overnight service. Overall, 75% of the population in Queens will be served by the overnight network, marking a 3% increase in coverage and further strengthening transit access during overnight hours.

The result of this analysis demonstrates that the Queens Bus Network Redesign enhances transit access for residents across all Equity tiers. Areas with the greatest needs, which already benefit from robust service today, will see additional improvements as a result of the Redesign with increased coverage of both the all-day frequent network and the overnight network.

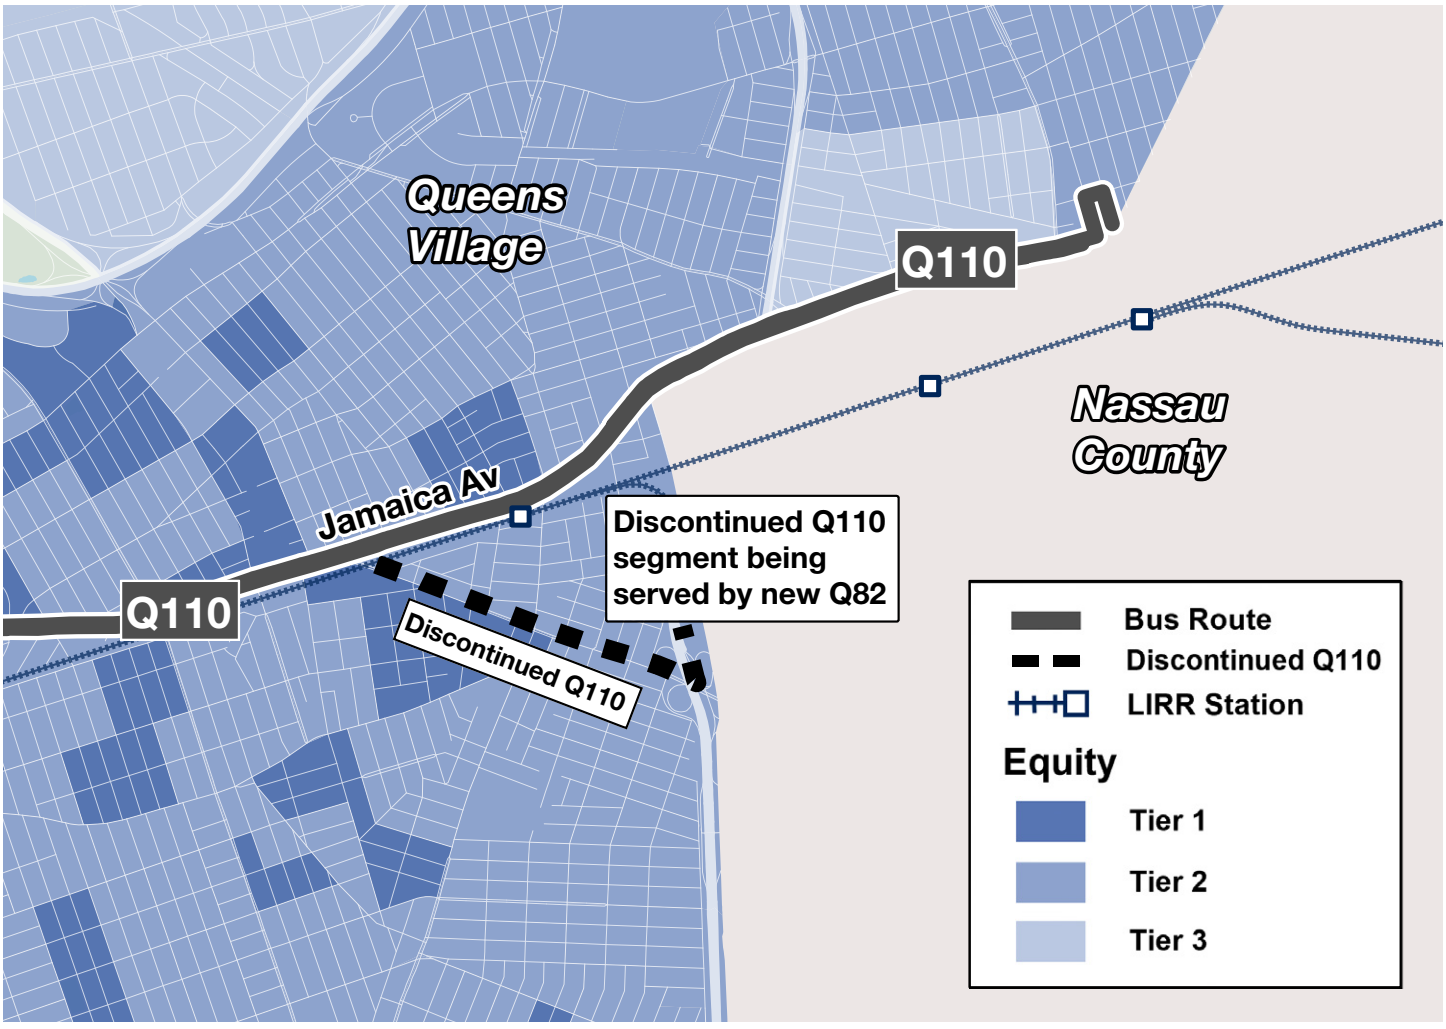

Appendix B

Routing

More Direct Routing

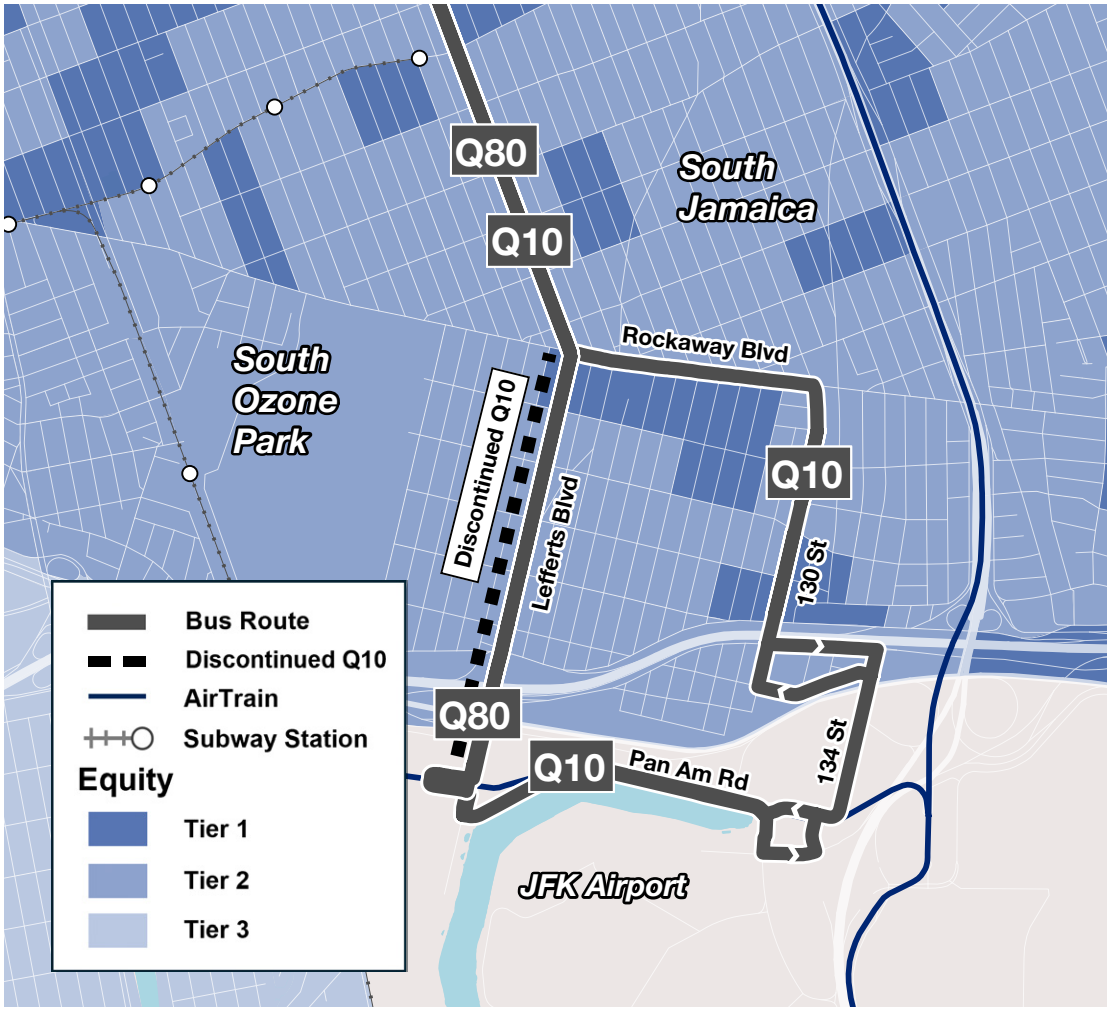

More direct bus routes offer several advantages that enhance both efficiency and the rider experience. By minimizing turns and deviations, direct routes reduce travel time, increasing speed and reliability. Several routes within the network have been streamlined, including the **Q110** in Southeast Queens. The existing **Q110** connects passengers from Parsons Boulevard in Jamaica to Belmont Park. By rerouting the **Q110** and extending it to Floral Park, the route now offers a more direct path and expanded coverage, enhancing travel efficiency in an area where 94% of the population is non-white and 40% is transit dependent. This change would also add a connection to the Queens Village LIRR. Passengers on the discontinued portion of Hempstead Avenue would be served by the new **Q82**, ensuring continuity of service in the area.

Appendix B

Simplify Variants

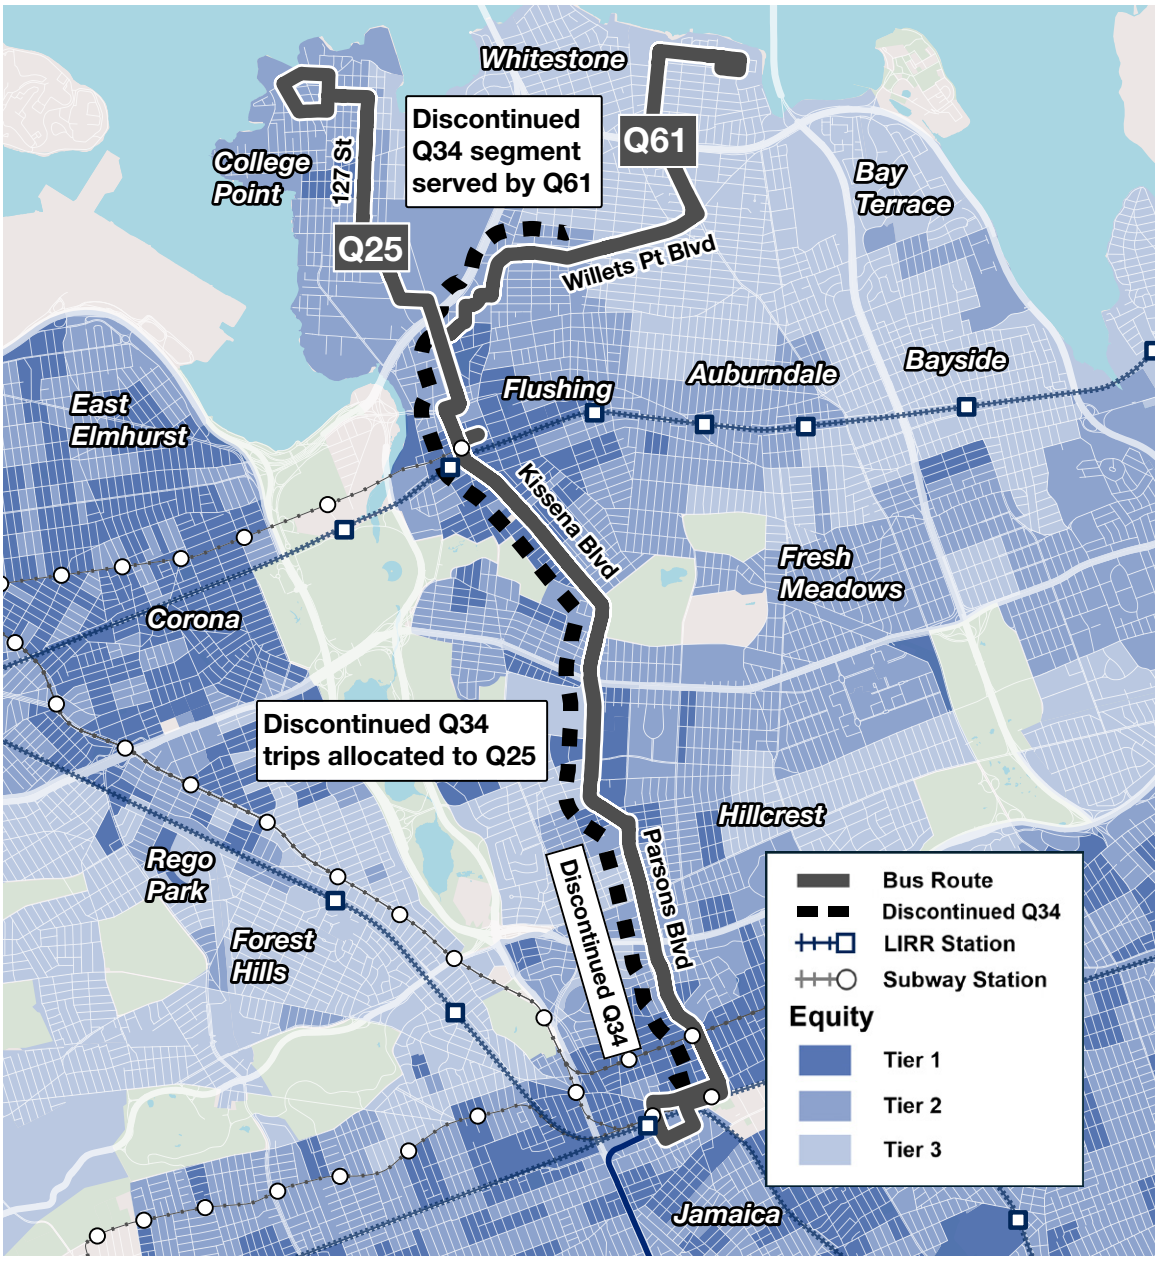

In Southwest Queens, the **Q10** route traverses several Tier 1 and 2 areas of equity consideration, and has multiple service patterns: one that travels along Lefferts Boulevard providing direct service to JFK Airport, another that serves South Ozone Park before heading to the airport, and a third that ends in South Ozone Park without continuing to the airport. While each of these branches serves a specific purpose, they can be confusing for passengers because they all share the same route number. To simplify the network, a new route label – the **Q80** – has been introduced for the Lefferts Boulevard route that goes directly to the airport and would serve a population that is over 80% non-white. The **Q80** would offer more frequent and new overnight service along the entire length of Lefferts Boulevard, improving service for airport workers who may have non-traditional work schedules. Meanwhile, the **Q10** would maintain its pattern between Kew Gardens and JFK Airport, still serving residents along Rockaway Boulevard and 130 Street. Additionally, the **Q10** would be restructured as a "Rush" route, providing faster service for South Ozone Park residents traveling to Kew Gardens, while still maintaining the connection to the airport.

Appendix B

Combine Routes

Within the existing network, there are routes that offer redundant service, a situation that the Redesign aims to eliminate. For example, the proposed **Q25** would absorb existing **Q34** trips and provide better service along Kissena and Parsons Boulevards, not only streamlining the network but also improving service on one of the Queens routes that serves the highest number of residents living below the poverty line. The remaining portion of the **Q34** not included in the **Q25** proposal would be served by the new **Q61**, improving reliability and introducing weekend service to Linden Hill, an area of Flushing with moderate to significant equity concerns.

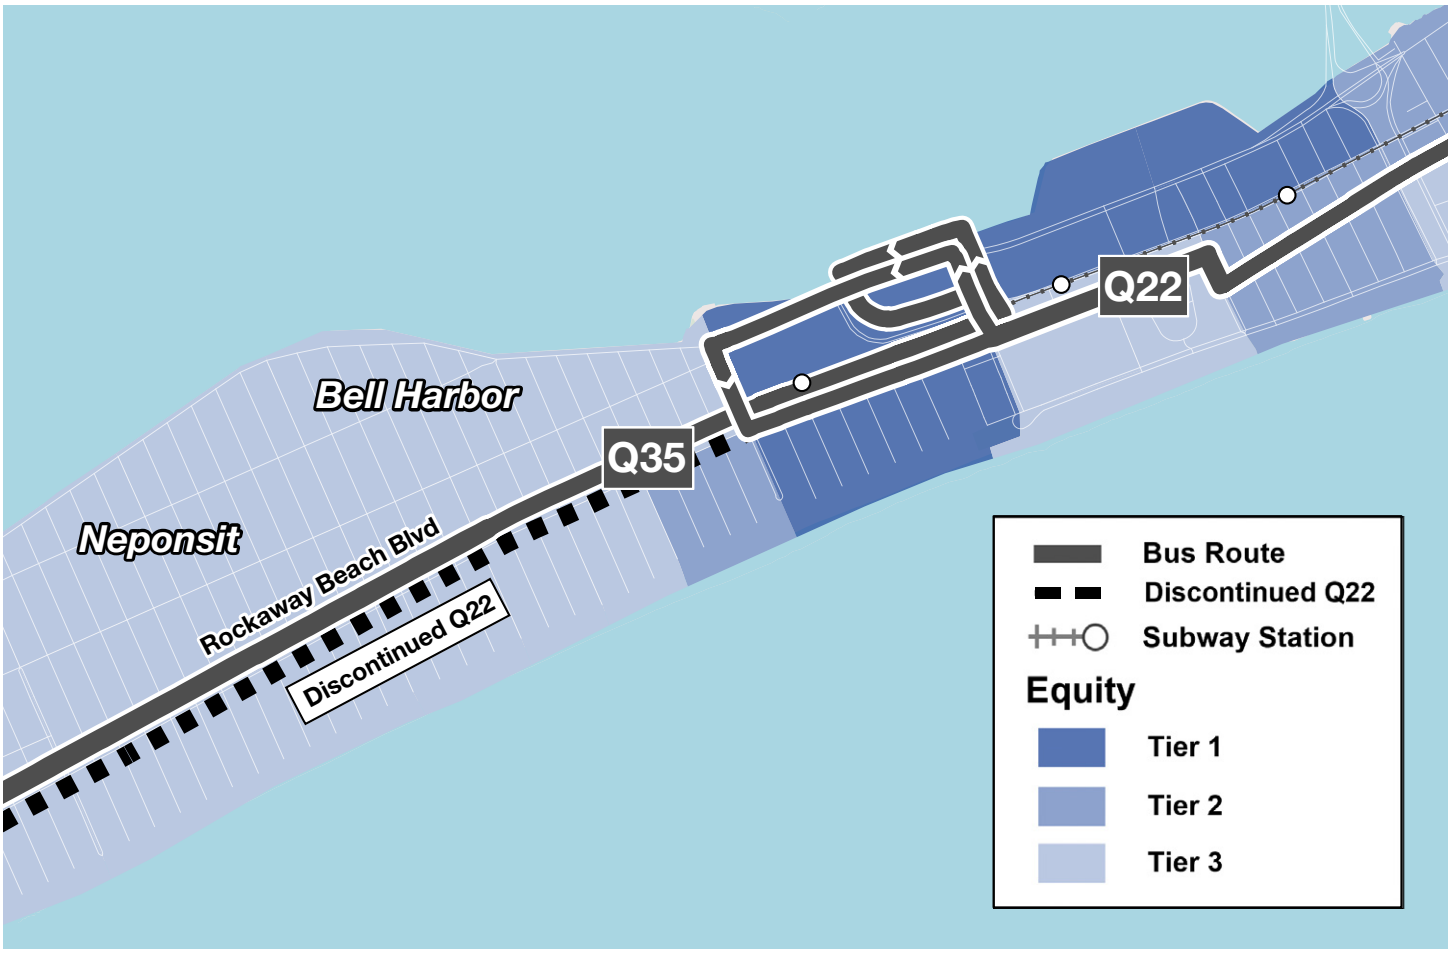

Appendix B

Shorten Routes

Shorter bus routes typically boast better reliability as they cover reduced distances, minimizing exposure to traffic congestion, accidents, and other potential delays. An example of this approach is seen in Rockaway Park, with the **Q22** being truncated at Beach 116 St. Due to low ridership along Rockaway Beach Boulevard west of Beach 116 St, the route is proposed to be shortened on its western end, with the **Q35** realigned to cover this segment. The portion of the existing **Q22** that will remain predominately serves communities that are in Equity Tier 1 and 2 areas. The residents living in these communities should expect to see increased reliability due to the elimination of potential delays along the discontinued portion of the route.

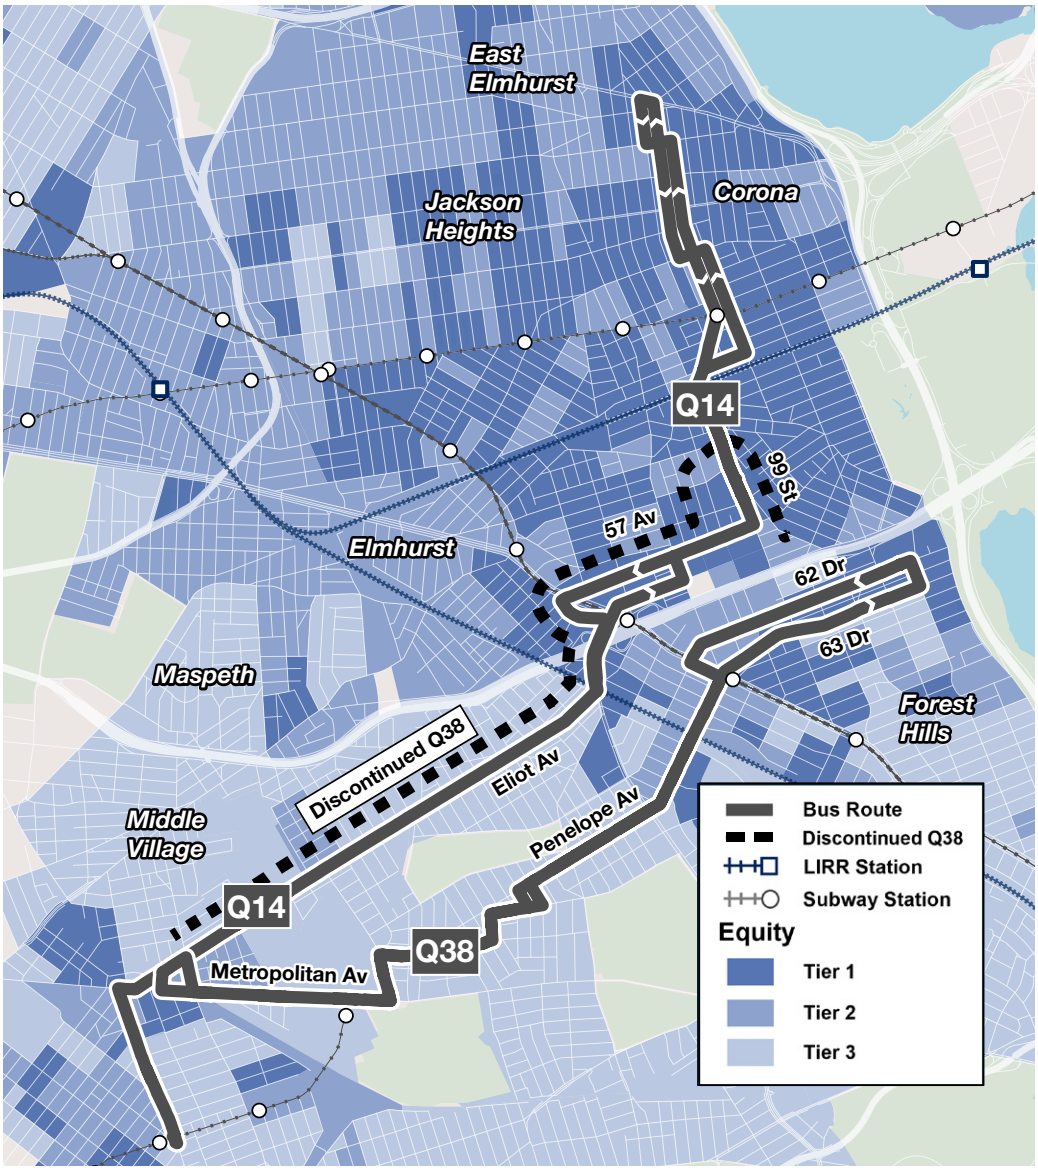

Additionally, the eastern end of the **Q22** will see an extension to the Far Rockaway LIRR station, enhancing connectivity for Rockaways residents, where most residents have a commute longer than 45 minutes. This new connection will provide residents with easier access to other boroughs via a discounted LIRR Far Rockaway Ticket, increase access to new opportunities, and/or shorten their commute.

Appendix B

Split Routes

A good example of a route split aimed at enhancing reliability is the **Q38**. Currently operating as a loop, the **Q38**'s start and end points are approximately a third of a mile apart, in Rego Park and Corona – neighborhoods within Tier 1 and 2 areas. To enhance service reliability, the proposed plan involves splitting the **Q38** into two routes. Service along 62/63 Drs, Penelope Avenue, Juniper Valley Rd, and Metropolitan Avenue, between Rego Park and Maspeth, is proposed to be maintained. The northern part of the **Q38** would be replaced by the proposed **Q14**, a new route that would also serve the northern segment of the existing **Q23** in Corona and East Elmhurst and the existing **Q39** on Forest Av, thereby establishing a new connection between East Elmhurst and Ridgewood and expanding access for residents within several Tier 1 block groups.

Appendix B

Improve Coverage

Route extension

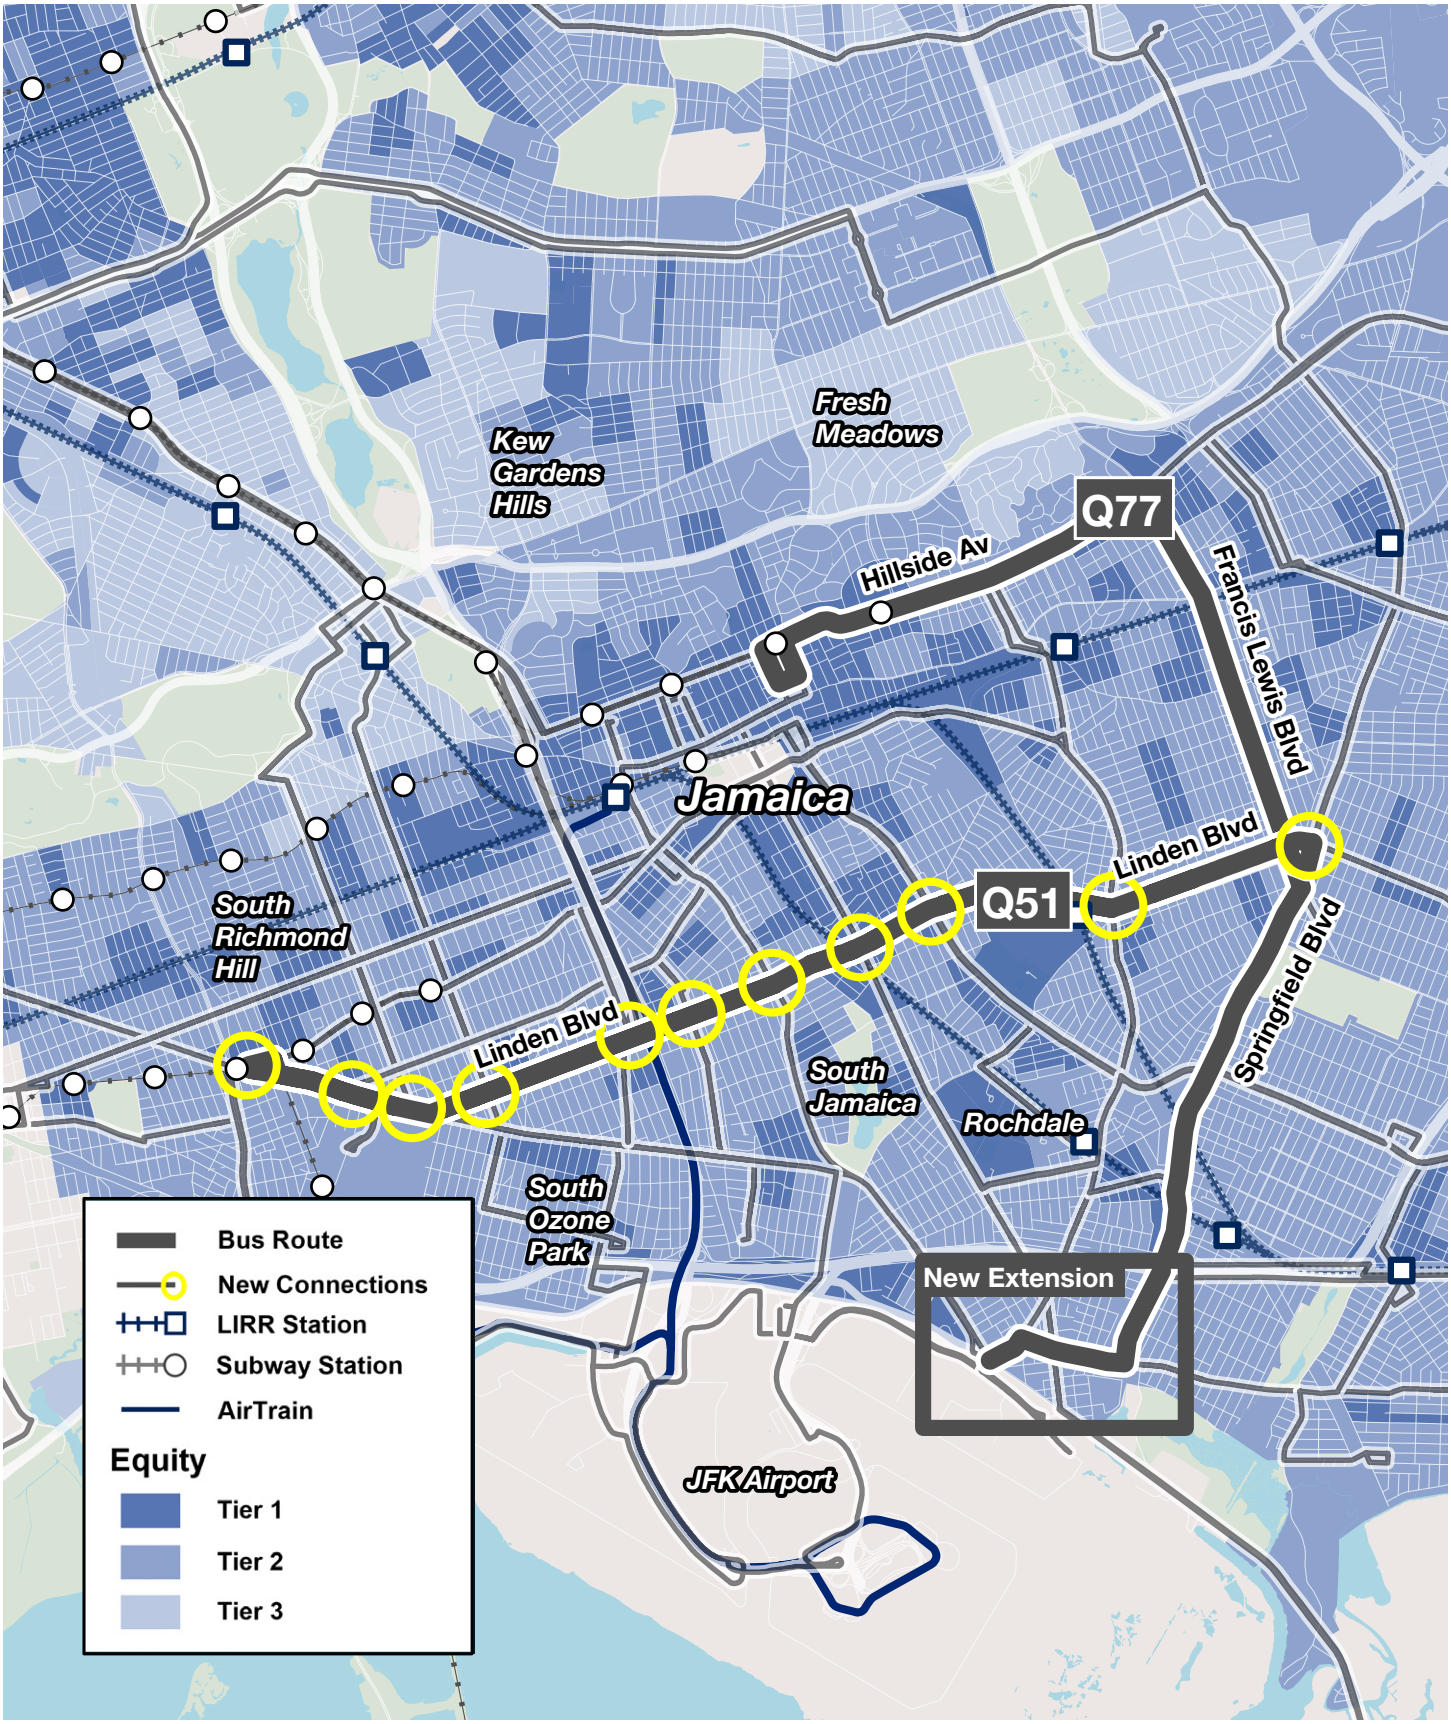

An important strategy the Redesign incorporates to address gaps in service and improve connectivity is extending routes. The proposed extension of the **Q77** is a good example of the strategy, designed to serve a portion of a corridor with moderate and significant equity concern currently lacking bus service. This extension would bridge the gap on Springfield Boulevard south of Conduit Avenue and on 147 Avenue west of Guy R. Brewer Boulevard, improving accessibility for residents in these underserved areas, connecting to additional routes, such as the Guy R. Brewer Boulevard routes (**Q111**, **Q113**, and **Q114**), and facilitating a connection to JFK Airport via the **Q3** and **Q6**.

New routes

Another approach the Redesign used to address gaps in the network includes the introduction of new routes. The **Q51** is a new east-west route in southeast Queens that serves Tier 1 and 2 equity areas and would facilitate connections with numerous bus routes and the A train at Rockaway Boulevard, eliminating the need for passengers to travel to downtown Jamaica for transfers and providing enhanced access across the borough.

Appendix B

Connect to Bus Priority

NYC DOT has conducted an analysis of major Queens corridors to identify streets where future bus priority treatments would have the greatest impact for Queens bus riders. These treatments aim to increase reliability and bus speeds on key corridors, enabling more efficient travel, reducing delays, and providing customers with more predictable arrival times. Most projects completed so far traverse Tier 1 and 2 areas, such as those along Northern Boulevard, which saw an increase of up to 25% in bus speeds. Main St / Kissena Boulevard boasted a 44% increase in bus speeds, while Archer Avenue, a predominantly Tier 1 area, exceeded expectations, showing up to a 57% increase in bus speeds.

Future opportunities for an even more equitable network

While the Redesign prioritized equity throughout the entire project, some proposals in several Tier 1 and 2 areas could not move forward due to resource constraints. However, these remain important additions to the network and should be revisited when resources become available. These proposals include:

Q43 Extension to Long Island Jewish Hospital

In the New Draft Plan, the **Q43** was proposed to be extended to Long Island Jewish Hospital. This extension would have created a new direct connection from Jamaica to the hospital, reducing the number of transfers required for passengers from Southeast Queens, an area of moderate and significant equity concern. The proposal was withdrawn due to resource constraints and lack of layover space at the hospital, but it is currently being investigated as an investment that will potentially be implemented separately from the Redesign.

Q44 Extension to Fordham Plaza

Proposed in the New Draft Plan but withdrawn due to resource and operational challenges, this extension would connect Queens to Fordham University, Metro-North, multiple Bronx bus routes, and other key destinations. It was particularly popular among students commuting from Queens to schools in the Bronx.

Appendix B

Q51 to Gateway Center

Initially included in both the Original and New Draft Plans, this interborough route would connect Cambria Heights to the Gateway Center mall in East New York via Linden Boulevard. Though the **Q51** as currently proposed still provides vital connections, restoring the original routing to Gateway Center would significantly enhance its value to Southwest Queens residents. This proposal will be reconsidered as part of the ongoing Brooklyn Bus Network Redesign.

Q52 SBS Extension in the Rockaways

While an extension to Beach 50 Street is proposed, longer extensions were deferred due to resource limitations. With the ongoing redevelopment of the Rockaways and expected population growth with increased availability of affordable housing options, a further extension of the **Q52** remains a promising option to meet future demand and reach more areas of significant equity concern.

Q78 Bell-Springfield Boulevards Route

Proposed in earlier drafts but omitted from the Proposed Final Plan and Addendum due to budgetary constraints, this route would provide continuous service along Springfield and Bell Boulevards, connecting Laurelton to Bayside. It would enhance connectivity across Southeast and Northeast Queens, serving schools, Queensborough Community College, and connecting to numerous other bus routes.

These proposals would represent valuable opportunities to further enhance equity within the Queens bus network as resources become available.

Conclusion

In a city where 85% of jobs are located within walking distance of rail and subway systems, the MTA serves as a critical lifeline, connecting residents to jobs, education, and essential services. In Queens, where residents often face longer commutes and limited access to subway and rail compared to other boroughs, the bus network plays an important role, especially for historically marginalized communities.

Equity has been central to the MTA's mission and was a driving principle throughout the Queens Bus Network Redesign project. Our analysis demonstrates that critical route changes were focused in areas with greater equity concerns, ensuring that these communities continue to have strong transit access. The improvements to both the all-day frequent network and overnight network reflect the MTA's dedication to directing transit investments toward the populations that rely on them the most, while also enhancing service across the entire network. These efforts highlight the agency's commitment to creating a more equitable and accessible transit system for all.
